SUMMARY

Full-Stack Software Engineer specializing in backend engineering, AI-integrated platforms, and scalable data pipelines. Experienced building and operating production-grade systems end-to-end with Node.js/Express, Next.js, Python/FastAPI, and PostgreSQL, from architecture through deployment and live production monitoring.

EXPERIENCE

Web7Labs - Full-Stack Software Engineer **July 2026 - Present**

- Core engineer on **Tourgenz** (tourgenz.com), an AI-powered tourism and booking marketplace for Pakistan, **live in production since September 2026**: a traveller app, five vendor portals, and an admin control room.
- For the Web7Labs marketing team, built **Client Hunt**, a crash-resilient desktop tool automating Google Maps lead prospecting (coordinate-expansion discovery, SQLite-backed deduplication with reason tags, 1-click Excel/CSV export), compressing their 8-hour manual day (~300 leads) into **~10 minutes**.

Bitbash - Software Engineering Intern **May 2026 - July 2026**

- Built and shipped an Instagram lead-generation platform that replaced a multi-day manual research process with a fully automated discovery-to-export pipeline, cutting manual effort by **95%+** while delivering thousands of qualified business leads daily.
- Engineered a Cloudflare-resistant Upwork scraping and alerting system using Python, GraphQL, and curl_cffi TLS impersonation, with a real-time Discord delivery pipeline pushing hundreds of automated job alerts daily across multiple niches.
- Built a ChatGPT content pipeline converting scraped jobs into SEO listing, service, and blog pages (**70%+ faster content creation**), then shipped and operated the systems in production, including a VPS-hosted lead platform running unattended for 24h+.

EDUCATION

The University of Lahore **Expected June 2027**
Bachelors in Software Engineering

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript, TypeScript, C++
- **Frontend:** React, Next.js, Vite, Tailwind CSS, Redux Toolkit, Zustand, React Query, Framer Motion, HTML, CSS
- **Backend:** Node.js, Express.js, FastAPI, REST APIs, GraphQL, Prisma, SQLAlchemy, AsyncIO, Zod, JWT auth, SSE streaming
- **AI & LLM Engineering:** OpenRouter, RAG grounding, prompt pipelines, model failover, stream sanitization, insight caching
- **Automation & Data Engineering:** Selenium, Playwright, Puppeteer, GraphQL Scraping, TLS Impersonation, Headless Chrome
- **Databases:** PostgreSQL (PostGIS, pgvector), MongoDB, MySQL, SQLite
- **Tools & Platforms:** Git, GitHub, VPS, Postman, Vercel, Railway, Supabase, Streamlit, Cloudinary, Vitest, Sentry

PROJECTS

Tourgenz: Tourism & Booking Platform (tourgenz.com) **Web7Labs, 2026**
Tech Stack: *Next.js 15, React 19, TypeScript (strict), Express.js, PostgreSQL (PostGIS, pgvector), Prisma, OpenRouter LLM APIs, MapLibre GL, Tailwind CSS v4, React Query, Zustand, Framer Motion, Vitest, Cloudinary*

- Built the booking and payments flow: travellers offer their own price within configurable discount and counter limits, every booking status change passes through **one shared, tested path**, and money is tracked in a wallet ledger with holds and a full audit history for commissions and refunds.
- Built the AI trip planner and chat assistant, restricted to recommending **only real, bookable listings from the catalog**.
- Shipped an interactive 3D satellite globe on a **zero-API-key map stack** (MapLibre GL + open tile sources) with PostGIS administrative drill-down across **493 curated destinations** and **8,445 precomputed geospatial grid cells** carrying AI-written area insights, rebuilt automatically after catalog writes through a debounced PostgreSQL queue.
- Built login and sessions from scratch: short-lived access tokens held in memory (never localStorage), auto-refreshing httpOnly cookies that **detect a stolen or reused session and sign it out everywhere**, bcrypt password hashing, and per-role access checks across 5 user roles.
- Kept the platform reliable without CI: **~2,000 automated tests across 214 files** running against a separate test database, **111 hand-written SQL migrations** for the PostGIS/pgvector database, input validation on every endpoint, and strict TypeScript.

Instagram Lead Generator
Tech Stack: *Python, FastAPI, PostgreSQL, asyncio, React, Playwright*

- Architected a fully automated asynchronous discovery, qualification, and export pipeline processing up to **10,000 qualified business profiles in 24 hours** across a **124-hashtag** client list.
- Built a resilient proxy subsystem (~25 datacenter proxies, reactive rotation, escalating cooldowns, curl_cffi TLS impersonation) with crash-resilient fault tolerance, and a secure React + FastAPI dashboard (JWT auth, live KPIs, streaming CSV export) on a VPS.

Upwork Job Intelligence & SEO Publishing Platform
Tech Stack: *Python, Electron, Next.js, PostgreSQL, Puppeteer, curl_cffi*

- Built an end-to-end Upwork automation platform that scrapes live job postings via a reverse-engineered internal GraphQL API (bypassing Cloudflare Turnstile), filters them with ChatGPT, auto-generates SEO content, and publishes to a public Next.js site, coordinating two PostgreSQL databases via a watermark-based sync cron.
- Automated ChatGPT via Puppeteer with no API key and self-healing session auth; a consolidated single-prompt strategy returned four delimited content blocks per job, **cutting generation time 1-2 minutes per listing**. View Source code

TransGPA: Academic Transcript Analyzer & CGPA Simulator
Tech Stack: *React, TypeScript, Vite, Tailwind CSS, Recharts, pdfjs*

- Built a privacy-first transcript analyzer used by **100+ students**, enabling **real-time GPA simulations** with Recharts dashboards, parsing academic PDFs locally in **<2 seconds** with zero server-side data storage. View demo

Khilariverse: E-commerce Gaming Peripherals Store
Tech Stack: *MongoDB, Express.js, React (Vite), Node.js, Redux Toolkit, Tailwind CSS*

- Developed a full-stack MERN e-commerce platform with **100+ products and role-based access**, **5+ admin analytics modules** for sales, inventory, and order tracking, and fully automated Cloudinary image storage and transactional email delivery. View demo
